Agenda of our meeting

- Database and User Interface(UI) design(Cont.).

Discussion

In this meeting we discussed about the design of the user interface and databases that were previously decided. We discussed about all the components of UI and database design like layout of the log-in form, user profile, layout of seller and buyer page and layout of home page etc. Our discussion was focused on following points:

Correction in Web UI Design

- After log-in page, there should be three sections Top Selling, Highest Rating and Recent questions in forum.
- In book search option team members suggested that there should be related hash-tag → related books.
- In the selling and buying page there should be option for adding a new book and removing the link after selling.
- Seller's page should show all the list of buyers.
- Delete similar questions from queries, faculty can change the question. There should be an edit option on forum questions and a difference between a student profile and a faculty profile.
- General rating is shown by default. And in particular books rating would be displayed in two ways - students' rating and faculty rating.

Correction in Android-UI Design

- At the log-in page remove the Home button and remove the toast message add pop-up.
- In the home page add a book option in the navigation bar, remove categories means remove multiple tabs and add it in the navigation bar.
- There would be an activities page on the book page that will list all the activities like- selling and buying history of the sellers.

Conclusion

- Database and UI Design is in the running mode.
- Test cases are also in running mode.

Next meeting

Agenda of our next meeting is :

- Create RTM(Requirement Traceability Matrix), Activity graph and test cases for all the requirements.
- Again review the database and UI design and made corrections accordingly, if required.

Venue - 107(Hostel-3)

Date - 27 September, 2015
