Agenda of our meeting

- Search for new Project ideas

Discussion

- The purpose was to look for new ideas. The first idea that we were looking was not feasible so we had to drop it. The problem with the first idea i.e. target localization was this project was not divisible amongst 10 people and consisted of more complex mathematics. So we decided to move to another ideas which can be divisible and feasible. The ideas we looked at were -

- NS-3 Simulator for graph algorithms, Automata and Computer Network problems - The idea was about to look at different graph problems , client-server side and Deterministic, Non-Deterministic Automata using Network Simulator type another simulator.
- Physics Experiment Simulations - The idea was to develop simulations for all the possible experiments that a student encounters in his first semester in IIITV.
- IDE (Create APIs) - We were thinking about creating various api(s) for different problems that would help in solving larger and complex problems.
- E-Campus - The idea behind to create an E-Campus System and a web-portal or an application which would consist of all the activities going within the college.
- Others were - Android Game for puzzles, Simulator for John Nash El Farol Bar problem, Steganography project.

Conclusion

So, after discussing for about 1 hour, we were still in a doubt that would this project be divisible? Would everyone have something to contribute? Finally we decided to look forward to other ideas.

Next meeting

Agenda of the next meeting:

- Decide the final project

- Further work on project ideas

Venue - Room B019

Date - 21 August, 2015

Time - 10 pm
